Why ROB-MEN?

# Reporting bias in NMA

Network of placebo-controlled studies of 32 oral antipsychotics for the acute treatment of adults with multi-episode schizophrenia.

**Outcome:** overall efficacy, symptoms of schizophrenia as measured by rating scales.

- ❖ Direct comparison → Pairwise MA reporting bias methods
- ❖ NMA estimate: contribution from direct and indirect evidence
- ❖ Risk of bias: low, some, high ?
- ✓ ROB-MEN tool
- ✓ CINeMA framework

(Huhn et al, *Lancet* 2019; 394: 939–51)

# Overview of ROB-MEN

# Within-study assessment of bias

- ROB-ME (<https://www.riskofbias.info/welcome/rob-me-tool>)
- ORBIT classification (<https://www.outcome-reporting-bias.org/>)

Signalling question	Responses for each comparison (groups A and B only)		
Was there any eligible study for which results for the outcome of interest were unavailable, likely because of the $p$ -value, magnitude or direction of the result generated?	Yes	Yes	No
(If Yes to the previous question) Was the amount of information omitted from the synthesis sufficient to have a notable effect on the magnitude of the synthesised result?	Yes	No	-
Overall judgement	<i>Suspected bias (favouring X)</i>	<i>No bias detected</i>	<i>No bias detected</i>

# Across-study assessment of bias

	comparison	bias	p.value	interpretation
1	Chlorpromazine vs Placebo	-1.89	0.06	Small studies favour 1st intervention
2	Haloperidol vs Olanzapine	-1.06	0.14	Small studies favour 1st intervention
3	Haloperidol vs Placebo	-0.8	0.24	Small studies favour 1st intervention
4	Haloperidol vs Risperidone	1.4	0.1	Small studies favour 2nd intervention
5	Olanzapine vs Placebo	-2.2	0.2	Small studies favour 1st intervention
6	Olanzapine vs Risperidone	-0.44	0.44	Small studies favour 1st intervention
7	Placebo vs Risperidone	1.2	0.38	Small studies favour 2nd intervention
8	Quetiapine vs Risperidone	-0.17	0.77	Small studies favour 1st intervention

89	Paliperidone/Placebo	0	0	No substantial contribution from bias	No bias detected	-9.82 (-11.96 to -7.66)	-8.91 (-11.17 to -6.64)	No evidence of small-study effects	Low risk

# Final remarks

---

- ROB-MEN first tool to evaluate bias due to missing evidence in NMA
- The ROB-MEN app simplify the assessment process
- Part of CINEMA framework (<https://cinema.ispm.unibe.ch/>)
  
- Not published in journal ≠ reporting bias
- Missing data problem
  
- Run the NMA before using the ROB-MEN app
- Follow the instructions in the app and guidelines in the paper

# Future updates

---

- New version of the app
- Update documentation
- Tutorial paper in draft

[virginia.chiocchia@ispm.unibe.ch](mailto:virginia.chiocchia@ispm.unibe.ch)
